100°C

NEW QUOOKER FLEX

The first boiling-water tap,
equipped with a flexible
pull out hose

Safe due to the boiling-
water stop

Quooker[®]
THE BOILING-WATER TAP

The Flex is Quooker's latest innovation. The world's first 100°C boiling-water tap, equipped with a flexible pull out hose for hot, cold and filtered cold water. This makes it very easy to rinse and clean at any point in the sink. Next to this convenient pull out hose, the Quooker Flex offers the same advantages as the familiar Quooker. It delivers water at a true 100°C, saves time, energy, water and space. Thanks to the boiling-water stop, the Flex will not dispense boiling water when the hose is pulled out. The childproof double push-and-turn handle, insulated spout and fine aerated spray ensure no risk of scalding or burning. The Quooker Flex is available in a round style and can be finished in polished chrome or true stainless steel. This tap is also available with a cold water filter option built into the push and turn function.

For more information about the Flex or other Quooker boiling-water taps visit quooker.co.uk
